maximum matching on bipartite graphs
distance to disconnected
vertex connectivity
reduced bandwidth
bounded components
maximum leaf number
vertex cover
distance to complete
feedback edge set
bandwidth
vertex integrity
distance to linear forest
distance to stars
twin-cover number
maximum matching
edge clique cover number
distance to co-cluster
clique cover number
cutwidth
topological bandwidth
distance to bounded components
h-index
feedback vertex set
treedepth
distance to cluster
neighborhood diversity
maximum independent set
reduced edgeless
pathwidth+maxdegree
carving-width
degree treewidth
distance to maximum degree
distance to outerplanar
pathwidth
d-path-free
distance to block
shrub-depth
distance to interval
nodulae-width
maximum induced matching
domination number
distance to cograph
genus
maximum degree
treewidth
distance to planar
linear clique-width
odd cycle transversal
distance to chordal
diameter
c-closure
book thickness
branch width
star-arboricity
thickness
outerthickness
boolean width
linear NLC-width
linear rank-width
average distance
distance to perfect
NLCT-width
acyclic chromatic number
twin-width
mim-width
clique-width
girth
clique-tree-width
bisection bandwidth
degeneracy
rank-width
boxicity
NLC-width
arboricity
average degree
chromatic number
inf/sup-width
minimum degree
maximum clique
radius+flip-width
chordality
edge connectivity
domatic number
