maximum matching on bipartite graphs
reduced bandwidth
vertex connectivity
distance to disconnected
vertex cover
bounded components
maximum leaf number
bandwidth
feedback edge set
vertex integrity
distance to linear forest
distance to stars
twin-cover number
distance to complete
maximum matching
cutwidth
topological bandwidth
distance to bounded components
h-index
feedback vertex set
treedepth
distance to cluster
edge clique cover number
clique cover number
distance to co-cluster
pathwidth+maxdegree
degree treewidth
carving-width
distance to maximum degree
distance to outerplanar
pathwidth
d-path-tree
distance to block
distance to interval
neighborhood diversity
reduced edgeless
maximum independent set
maximum degree
treewidth
genus
distance to planar
odd cycle transversal
linear rank-width
shrub-depth
distance to chordal
distance to cograph
modular-width
domination number
maximum induced matching
c-closure
outerthickness
star-arboricity
branch width
thickness
book thickness
boolean width
linear clique-width
distance to perfect
diameter
NLCT-width
acyclic chromatic number
mim-width
twin-width
linear NLC-width
clique-width
average distance
clique-tree-width
degeneracy
rank-width
bisectty
NLC-width
girth
bisection bandwidth
arboricity
average degree
chromatic number
inf-flip-width
minimum degree
maximum clique
radius-r flip-width
chordality
edge connectivity
domatic number
